

# YOUR HEALTH MATTERS.

## Oral health is very important and Miles for Smiles is committed to providing quality dental care to the entire community.

A healthy mouth, teeth, and gums have a positive effect on your wellness. Miles for Smiles is a sterile self-contained dental facility, which utilizes essential staff to service treatment needs on-site. During scheduled treatment days at schools, a member of our team interacts with school officials and escorts patients to and from their classrooms. Our employees always wear masks and our mobile is equipped with external vents

to remove potentially contaminated air. As society adjusts to the COVID-19 virus, it is paramount that we keep ourselves as healthy as possible. Miles for Smiles is dedicated to providing the cleanest and safest environment to protect visitors, patients, and staff. The atmosphere has changed since many patients last visited our office, but safety continues to be a top priority.

## Miles for Smiles has added the following precautions to minimize potential exposure to COVID-19.

- Seating level HEPA air filtration systems with UV lights.
- Limiting patients on the mobile to three students after check in.
- Tactfully separating parents to enhance safety and mitigate anxiety.
- Mandatory pre-work day temperatures reading, which are logged every day for each employee. A quarantine protocol for employees showing a fever higher than 99.5, which does not allow them at the office until further testing is completed.
- Mandatory temperature checks for all patients, before entering our mobile facility. Patients with a temperature above 99.5 appointment will be rescheduled.
- Readily available hand sanitizer for all employees and patients.
- CaviCide disinfected treatment rooms for all student services.
- Aerosol sprayed disinfectants to help reduce airborne viruses.
- Upgraded PPEs, including masks, gloves, gowns, face shields, and more.
- Professionally cleaned and meticulously maintained uniform.
- The iWave-R air purifier is attached to mobiles air conditioning systems.
- Dry shields are attached to all high-volume suction lines to help with the removal of aerosols at the time of treatment procedures.
- AeroClave professionally cleans the mobile facilities. AeroClave is used in many hospitals, schools, Fire/EMS, Law Enforcement, and Military Aircraft.

## IN HEALTH AND BEAUTIFUL SMILES...

In addition to the aforementioned, Miles for Smile tediously monitors and follows the guidelines recommended by the CDC, LDH and ADA. Our astute and agile team is adept at pivoting to ensure safety and high quality.

Thank you for your partnership and please contact Dr. Alexander for additional information:

# LEARNING, LOVING, AND LEADING OUR COMMUNITIES TO BETTER HEALTH CARE OUTCOMES

“Oral health is a window to overall health. The mouth is the entry point to the respiratory and digestive tract and a good oral hygiene prevents other diseases. Problems in your mouth, such as tooth decay and gum disease can affect the rest of your body. Poor oral health can be linked to most comorbidities. It is very important to visit the dentist for regular check-ups and follow up on all dental issues. Healthy teeth are a key to fulfilment and well-being.”

— Miles for Smiles

For more detailed information, regarding our new implementations, please visit these websites:

## 01 ARAMARK

As an innovative leader in infection prevention, Aramark Uniform Healthcare helps companies of all sizes reduce the risk of healthcare-associated infections.

## 02 iWAVE-R

iWave-R is the world’s first self-cleaning, no maintenance needlepoint bi-polar ionization generator designed specifically for treating air in residential duct A/C systems.

## 03 DRY SHIELD

Dry Shield combines the tasks of high-suction evacuator, saliva ejector, bite block, tongue shield, and oral pathway protector in one easy-to-use device.

## 04 GERM GUARDIAN

Improve your indoor air quality with the Germ Guardian 3-in-1 Air Purifier. Perfect for allergy sufferers, the HEPA filter captures 99.97% of dust and allergens as small as .3 microns in size!

## 05 AEROCLAVE

AeroClave: Automated, No-Touch. Eliminate the human error associated with conventional cleaning methods.

Benefits include the following: Reduces staff & patient exposure to dangerous pathogens, Faster process requiring less labor, Safe for sensitive electronic equipment, Consistent, reliable delivery of disinfectant, Improves unit turn-around time, and Improved cleanliness.
